PRODUCT IN FOCUS - Merset Bearings

With **Meritor Premium Bearings**, you can count on exceptional quality. All bearings start out with a high grade steel and are designed and manufactured with one objective: **to ensure maximum performance.**

In-process manufacturing controls focus on micro-crack and inner/outer ring micro-burn detection to maintain an outstanding product throughout.

Certified ISO9001-based Quality Management System assessments provide additional validation in the design and manufacturing process, while assembly is performed in a controlled atmosphere to safeguard against contaminants.

FEATURES & BENEFITS

- Manufacturing using the same processes as Meritor production bearings
- Only high grade raw materials
- Less impurities for greater performance
- Through-hardening process for elevated tensile strength
- Precise internal geometry
- Tighter accuracy and performance
- Traceability
- Ability to trace a part from raw materials through production ensures product integrity

Meritor Bearings are backed by a series of validations including integrity testing, as well as Meritor engineering and third-party testing – **all to ensure the long life and high reliability you expect from a premium bearing.**

Combined, these extensive quality measures result in a premium bearing that delivers outstanding performance while supporting vehicle longevity.

TECH TIP Seal Installation Instructions

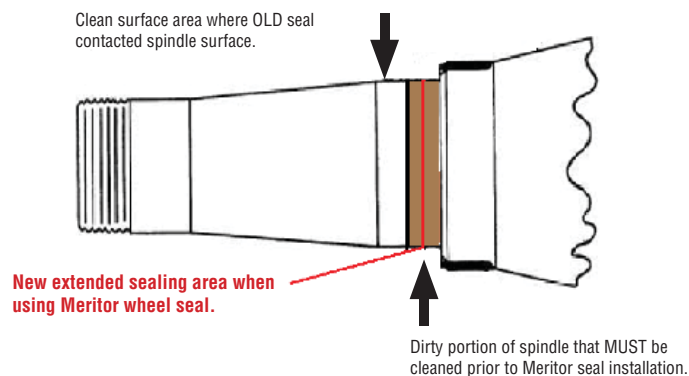

MERITOR® WHEEL SEAL INSTALLATION INSTRUCTIONS

1. Ensure the hub is free of rust, dirt, scratches and sharp edges.
2. Apply lubricant on the seal OD.
3. Wipe off any excess lubricant with a cloth.
4. Install the seal into the Hub using your common/standard practices. It is important that the seal has equally bottomed out in the bore.
5. Ensure the axle spindle is free of rust, dirt, scratches and sharp edges. Follow axle spindle cleaning and preparation instructions see below.
6. Apply lubricant on the seal ID.
7. Wipe off any excess with a cloth.
8. Install the hub with seal onto the axle.

CRITICAL to Long Seal Life!!!!

AXLE SPINDLE CLEANING AND PREPARATION

The Meritor sealing surface extends beyond the seal/wear area where its competitive seal contacted the spindle surface; therefore, **it is imperative that the ENTIRE spindle surface be cleaned** — where dirt and grime build up — before installing the new Meritor seal. That gritty surface can and will damage the sealing lips of the new seal.

EMPLOYEE PROFILE - Luz Cota

Role at Meritor: SUPPLY CHAIN ANALYST

Year Joined: 2018

What is your background?

My background has been in the Supply Chain, Procurement and Customer Service areas. During my career development I had the opportunity to learn the different perspectives of these areas, particularly in my previous job with a chemical company in Mexico. In that role, I was in charge of Customer Relationship Management and Supplier Performance; it was a great opportunity to have a holistic overview of the system.

I recently finished my Master in Supply Chain Management here in Melbourne. Leading up to that I worked with Meritor Aftermarket as a Sales and Marketing Analyst, supporting the Sales and Marketing Manager.

Now, as the Supply Chain Analyst for Meritor Original Equipment, the loop is almost closed. This new role allows me to increase my skills and knowledge of other businesses and cultures which I have found very interesting and challenging.

Tell us a little bit about your main job responsibilities.

My main responsibilities in the Supply Chain role is to ensure we have all the required components on time to satisfy build rates, but always keeping in mind the cost of carrying excess inventory. If you think about it, Supply Chain is a very complex environment. At a simple level, we need to keep the inventory at optimal levels, fulfill customers' and production material requirements to 100%, and communicate with different departments to meet these goals. But in reality, we need to be able to respond quickly and accurately to constant changes including supplier stock-outs, late deliveries, traffic, quality and engineering requirements.

3. What is your biggest challenge and what do you enjoy most about your role?

Everything, I mean everything, is very dynamic and never boring. I always learn something new and I love that challenge.

What are your interests outside work?

I love spending time with my family and friends, practicing yoga and Pilates. I also enjoy watching rugby matches as I no longer have the strength to play it anymore.
